

TEST KITS & EQUIPMENTS

ER-40 DI WATER TWIN SET

This filter has been designed and manufactured for marine appliations to produce demineralised water. It's resin content is consist of both Cations and Anions. Cation resin replaces all positive ions by hydrogen H⁺ and Anions resin replaces negative ions by hydroxide OH⁻. As a result hydrogen and hydroxide generates pure water H₂O. With salt content and the conductivity at 0.05 μ S/cm and silicia content at 0.02 μ S/cm. Filter bottels hold 40 litres resin and their capacity is 250 – 900 liters/hour

IMPORTANT

The maximum recommended working pressure is 8 bar (120 psi).

This filter is designed for a maximum

working pressure of 10 bar (150 psi).

The system has to be frost protected. Temperature range 1 $^{\circ}C - 50 ^{\circ}C$.

Temperatures under 4 °C is not suggested.

Spare resin can be stored between minus $10 \text{ }^{\circ}\text{C} - 60 \text{ }^{\circ}\text{C}$.

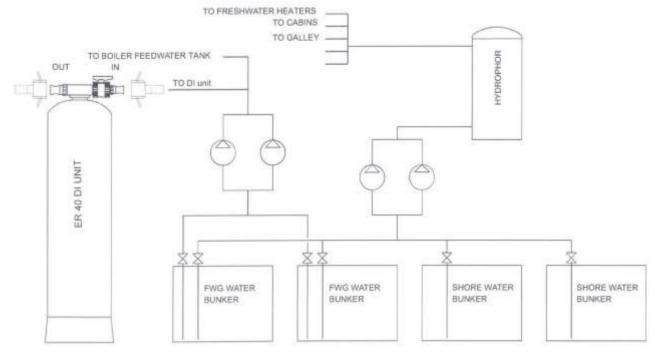

The mixed bed resin is a polishing resin, to produce ultra pure water from evaporator water as supply. Check the output water quality frequently!

The maximum allowable conductivity: 750 μ S/cm. The pureness of the produced water depends on the supplied water quality and the flow velocity through the filter.

Install a pressure relief valve in your system if there is no effective control of maximum line pressure.

TEST KITS & EQUIPMENTS

SUPPLY WATER QUALITY		Approximate production capacity	
Conductivity in µS/cm	Chlorides in PPM	In Liters	In m ³
1	0,3	750000	750,0
2	0,6	375000	375,0
5	1,5	150000	150,0
10	3	75000	75,0
20	6	37500	37,5
50	15	15000	15,0
100	30	7500	7,5
250	76	3000	3,0
500	152	1500	1,5
750	227	1000	1,0
